

**Shiori Usui**

**from scratch**

*for skin, percussion, accordion and live electronics*

**(2007)**

**FULL SCORE**

Item 2/15

*From Scratch* was premiered by members of *Klangforum Wien* (Bjoern Wilker, skin & percussion, and Krassimir Sterev, accordion) and Shiori Usui with live electronics in August 2007 in Müzzschlag, Austria.

# Instrumentation

Skin (of the percussionist)

2 Cymbals (ca.16inch – put on the floor, ca.14inch – suspended high)

Tam-tam (placed upside-down)

Snare Drum

3 Wood blocks (high, middle, low)

2 Toms (small/high, large/low)

Bass Drum

Vibraphone

pair of spoon

Accordion (with free-bass system)

Live-electronics (Max/MSP)

**Duration:** ca. 10 minutes

# Technical Requirement

2 condensor microphones

(low mic. - low positioned microphone, high mic. - high positioned microphone;  
position relative to the height of the percussionist)

2 contact microphones

(contact mic. 1 – large, mounted on Tam-tam , contact mic.2 – small, used by the percussionist in Section 2)

2 loudspeakers

(They should be put on the stands that are approximately 20cm high)

1 mixer

Max/MSP patch (version 5) available from composer

# Section 1 - Premise

## PERCUSSIONIST

- The player is surrounded by the percussion instruments that represent his/her body. Metaphorically the percussionist is trapped in his/her own body.
- The movement and position of the percussionist is an integral part of the work. The basic movement and position of the performer is suggested in the score, and these often associated with the position and distance between each instrument (e.g. depending on where the player has to move from to the other, he/she has to walk/jump/run. This suggests the sense of urgency, instability etc.), together with the exploration of what instrument is played and how.

The fact that the player shows his/her back to the audience for rubbing the skin towards the low positioned microphone at the beginning of the work also implies the idea that he/she does not wish to show the skin rubbing action (as having irritated skin and scratching it is rather a personal issue) and somehow tries to hide it.

## ACCORDIONIST

- The accordion represents the inner-self and the breathing of the percussionist. Hence the inclusion of the accordionist among the circle of percussion as it were a part of the “body”.

## SYMBOLS USED IN THE SCORE

### Basic Posture/Movement of Percussionist

Head down

Head up

Look forward

Freeze

Run

Hands, Nails, Spoons and Note-head (Percussion)

Right hand

Left hand

Right hand fingers

Nails

Spoons

Note-head for indeterminate pitch.

Wavy lines, Note-heads, Registration symbols (Accordion)

■ The accordion part is notated at the keyboard position it is played. Registration symbols indicate octave transpositions, doublings and so on (please see below for more information).

Wide vibrato: Contour indicates the scale of the intended effect.

Note-head for scratching bellow

Registration symbol: Unison only

Registration symbol: Octave higher only

Registration symbol: Unison and octave lower

Note-head for air sound

Other indications (Percussion & Accordion)

■ Usual rules of accidentals apply (i.e. they are only valid for all the notes of that pitch in that octave for the remaining duration of the bar).

Dynamics in quotation marks indicate the intended performance intensity of a passage rather than the resultant sound.

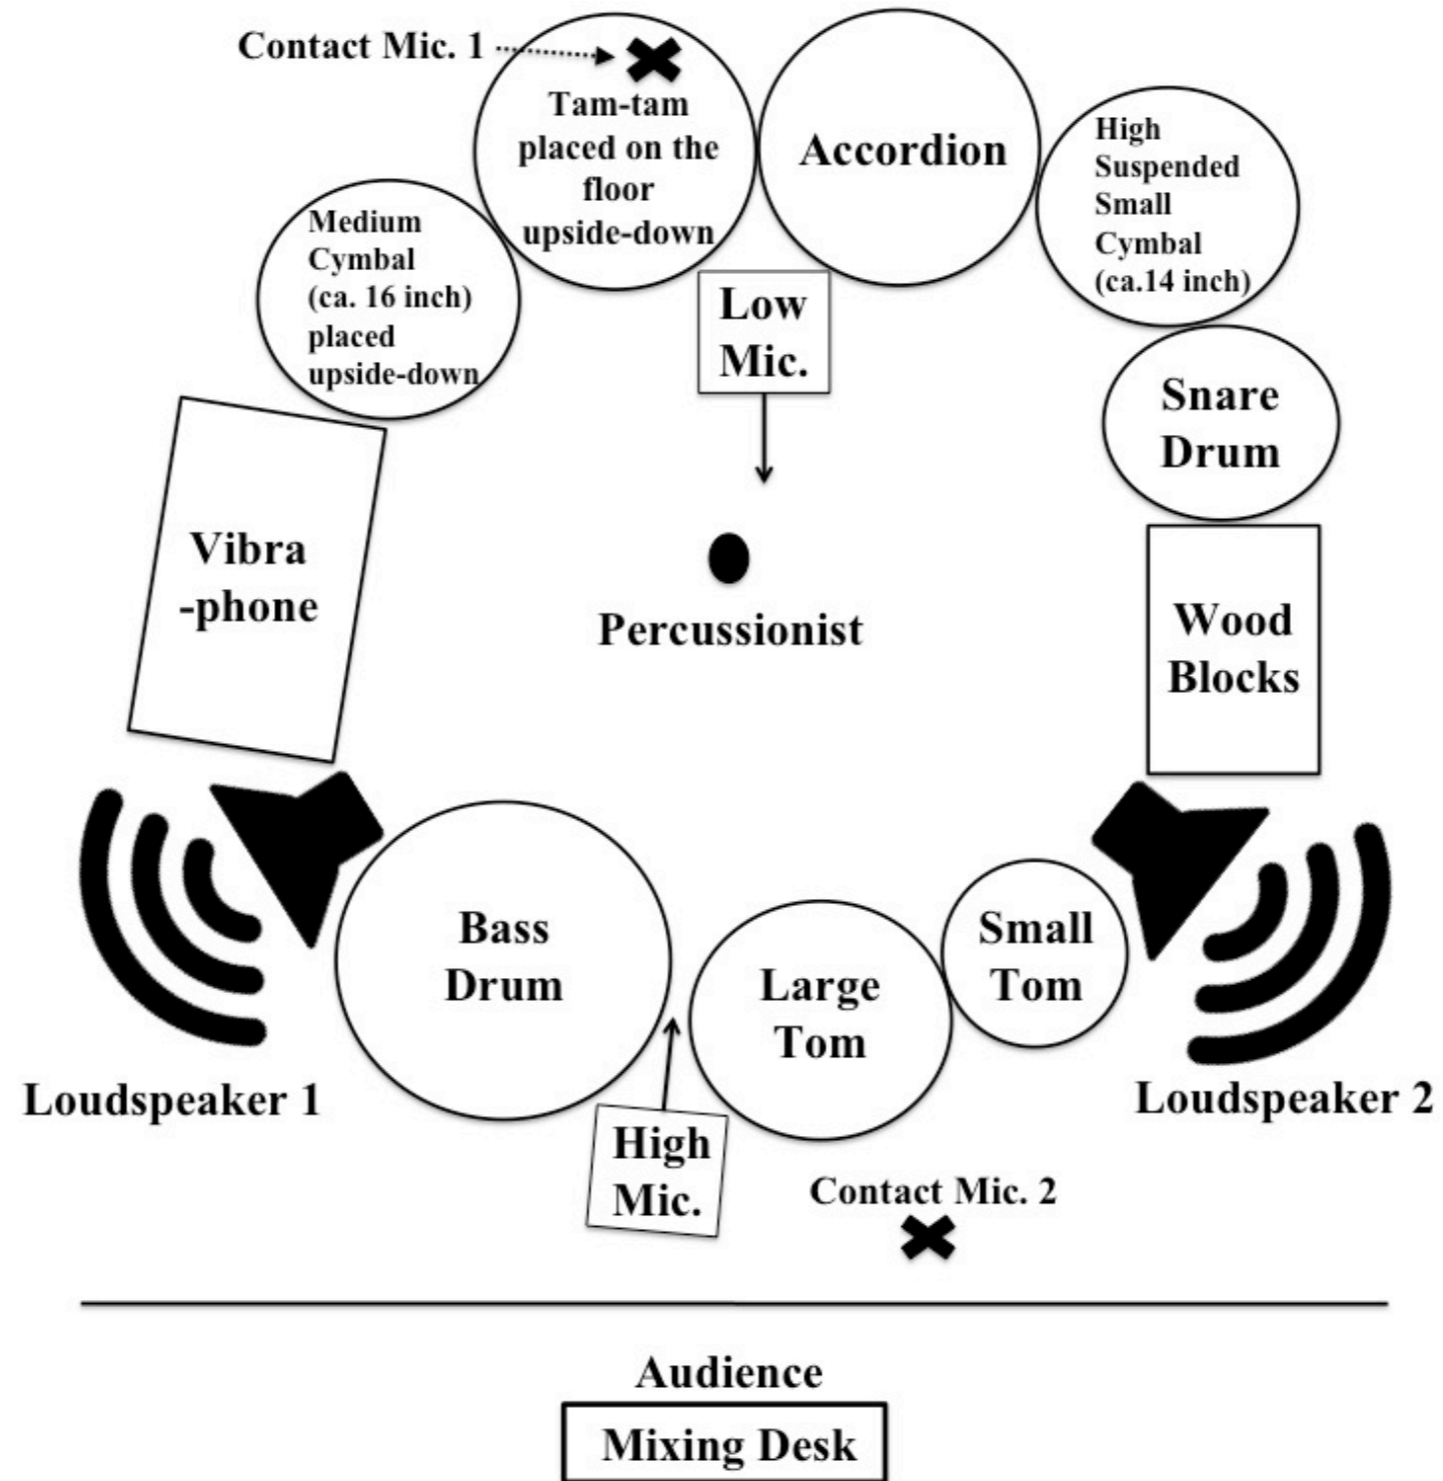

Dotted bar line is used solely for co-ordination purposes.

Sign for co-ordination

# Diagram For Section 1

# Interlude And Section 2 - Premise

## PERCUSSIONIST

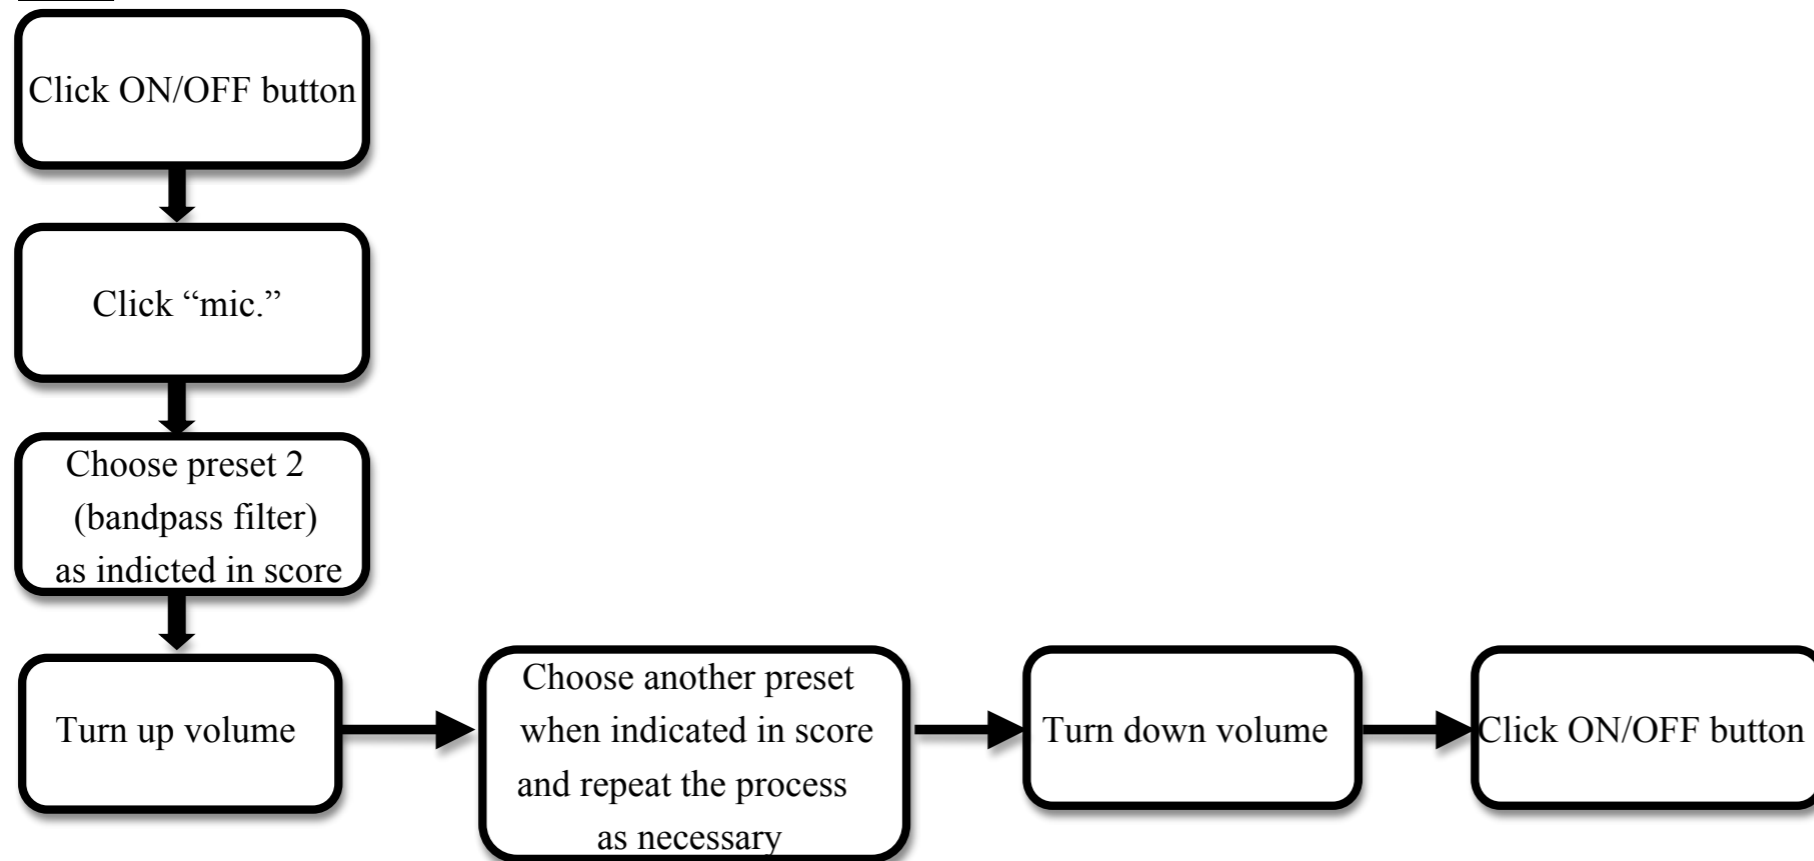

- After the percussionist breaks out from the circle of the instruments (i.e. his/her own body), he/she crouches down near the contact microphone 2 and starts scratching his/her own skin obsessively, forgetting about everything else around him/her.

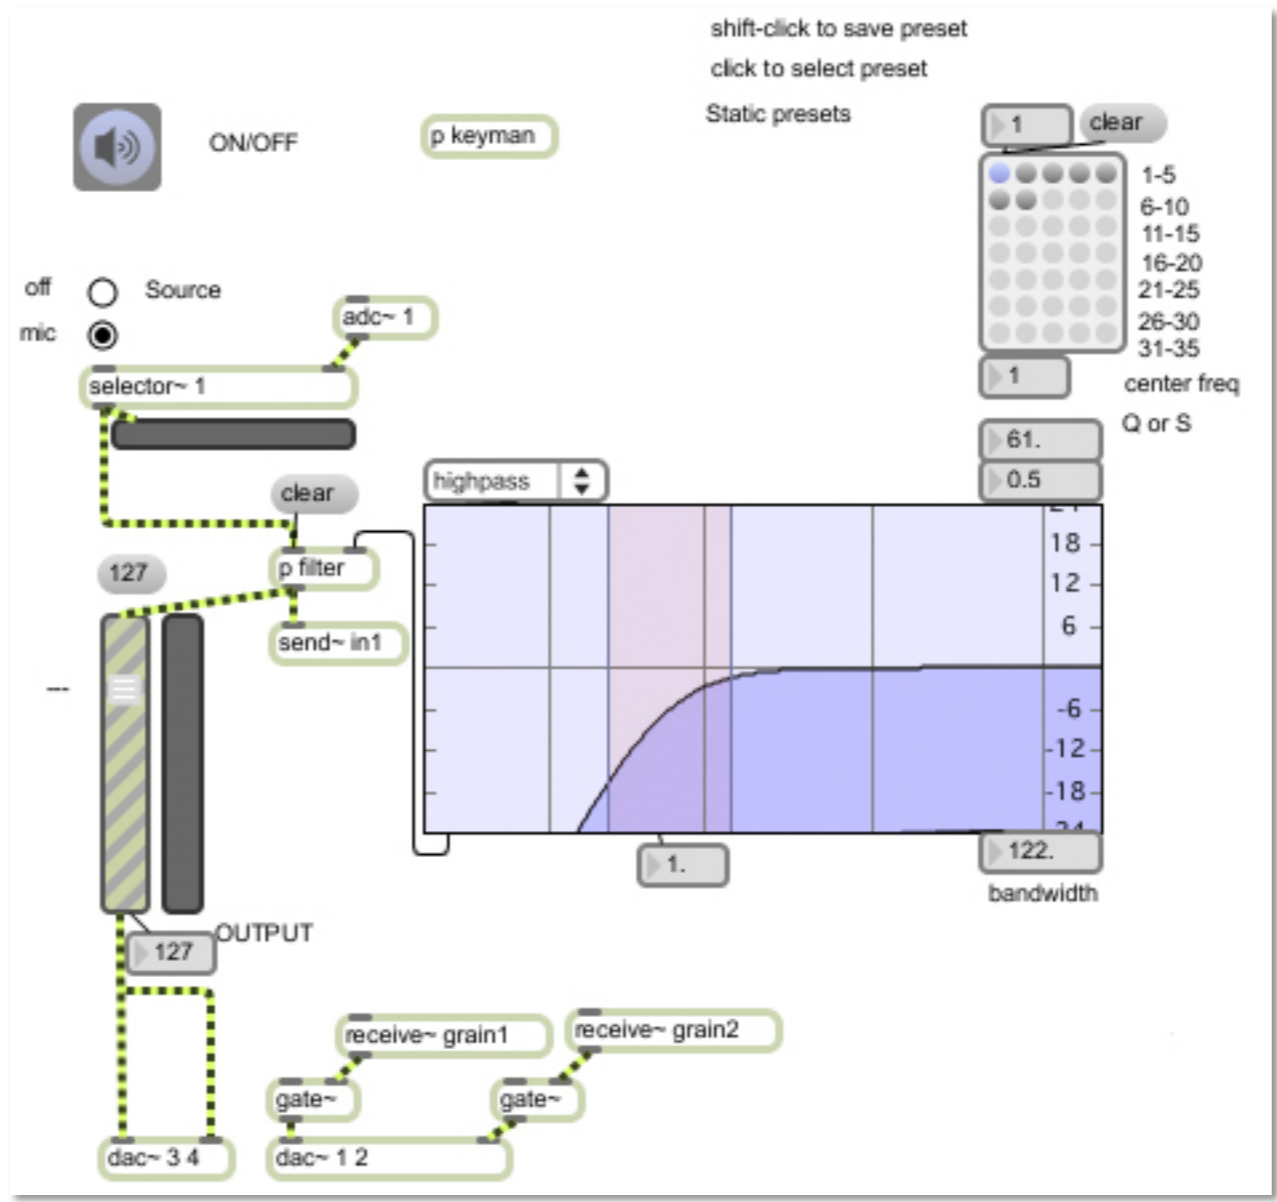

## LIVE-ELECTRONICS

- The timbre of scratching sound with the contact mic.2 is changed live by a musician at the mixing desk with the presets of the band-pass filters in the Max/MSP patch.
- Towards the end of the section, the pre-recorded scratching sound of skin used in the Granular Synthesis gradually takes over the scratching sound of the percussionist. The musician at the mixing desk should interact with the sound of the percussionist by “scratching” the pre-recorded sound of skin in a graphic window of the Granular Synthesis “Prism” with a mouse. The speed and pitch of the pre-recorded sample are changed independently and are controlled in the graphic window. The Y-axis of the window is for controlling the speed of the recorded sample being read, and the X-axis corresponds to the position of the recorded sample being read.

# Diagram For Interlude And Section 2

# Section 3 - Premise

## ACCORDIONIST

- Metaphorically, the sound of accordion portrays some “liquid substance” coming out from his/her body after scratching the skin excessively.
- Usual rules of accidentals apply (i.e. they are only valid for all the notes of that pitch in that octave for the remaining duration of the bar).
- The accordion part is notated at the keyboard position it is played (please see below for more information).

## Symbols

Buttons/keys

Semitone clusters

Registration Symbol:  
Unison and octave higher

Registration symbol:  
Unison only

## LIVE-ELECTRONICS

- The cue for the accordionist at the beginning of the section is given by the musician who plays the Max/MSP patch.

**Interlude between Sections 1 and 2**

**PERCUSSIONIST**

- After the percussionist breaks out from the circle of the instruments (i.e. his/her own body), he/she should crouch down near the contact microphone 2 (see the diagram for Section 2).
- He/she should slowly raise the head and look around, and should find the contact microphone 2 on the floor.
- He/she should begin scratching/rubbing he skin with the contact microphone 2, and should soon become obsessive with it, forgetting about everything else him/her.

**ACCORDIONIST**

- Stay still.

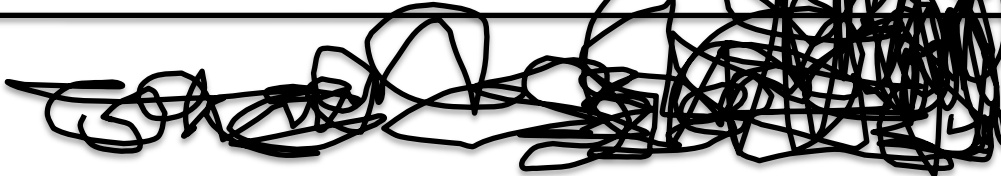

**Section 2 Full Score: Percussionist with a contact microphone**

Time	ca. 15 sec.	ca. 10 sec.	ca. 20 sec.
Neck			
Left arm	Scratch the skin obsessively with the contact mic. 		Scratch left arm and right leg alternatively. 
Right leg		Scratch the skin obsessively with the contact mic. 	
Max/MSP	Band-pass filter pre-set <b>2</b>	Band-pass filter pre-set <b>5</b>	Any band-pass filter pre-sets from 1 to 7.

Time	ca. 15 sec.		ca. 15 sec.	ca. 5 sec.
Neck			Scratch one spot of the leg obsessively  <i>"ff"</i>	Tap 
Right leg	Scratch one spot of the leg obsessively  <i>"mf"</i>  <i>"ff"</i>	PAUSE 		
Max/MSP	Any band-pass filter pre-sets from 1 to 10.	PAUSE 	Band-pass filter pre-set <p style="text-align: center;">3</p>	MSP Granular Synthesis on pre-recorded skin scratching sound Start playing after hearing a few taps of the skin. <u>Sound image:</u> Worms coming out from the inside of body.  <i>p &lt; mp &gt; p</i>

Time	ca. 25 sec.		
<b>Movement of percussionist</b>	After hearing the sound of “worms” he/she looks afraid. He/she looks around and tries to find out what is making the sound (He/she does not know the sound is coming from the inside of his/her body).	He/she cannot find the sound source and becomes more scared.	He/she goes back into the broken circle of the instruments (representing his/her own skin) and hides in them. The contact microphone is left on the floor.
